

PROJECT PROFILE

AIRPORT LINK

Northern Suburbs - Brisbane City
Infrastructure - Tollway and Road Tunnel

FAST FACTS

CLIENT	City North Infrastructure
SCALE	6.7km toll road including several tunnels (Project Value approx. AUD\$3.4 billion)
DISCIPLINES	
HIGHLIGHTS	<ul style="list-style-type: none"> Major road infrastructure project linking Brisbane's northern suburbs to the Airport Preparation of Volumetric Proposal Plans forwarded to affected property owners

JFP was one of a number of survey teams assigned to the high profile road tunnel and tollway project. By placing a highly experienced team, which had previous experience on the Clem 7 Tunnel, onto the task, JFP was able to complete its component of the project well ahead of schedule.

JFP was required to produce complex volumetric proposal plans for the project. These plans indicated precisely how properties located above the tunnel were to be affected by the volumetric resumptions made for the project. Plans were prepared and forwarded to over 40 affected property owners along the route. The varying surfaces along the tunnel profile challenged JFP to calculate the volumetric impact of the toll road on each property to the utmost precision.

After making a successful contribution to both the Clem7 Tunnel Project and the Airport Link Tunnel Project there can be no doubt that JFP has the skills and experience to play a constructive part on major infrastructure projects well into the future.
